

reliable - precise – cost-effective

Low cost semi-automatic wrap-around labellers for bottles, jars, aerosols, vials etc...

The CP21-LC system allows cylindrical products to be precisely and uniformly labelled giving a professional, high-quality appearance to finished products.

The bench-top design allows the operator to quickly and easily place the item and initiate labelling using a hand lever.

- **Accurate label placement**
- **Smooth application – no creases**
- **20 to 120mm diameter products**
- **Hand lever operation**
- **Typical throughput 800 products/hour**

The CP21-LC system will wrap labels up to 95mm wide (including backing paper) around the circumference of cylindrical products. Products are placed on the drive rollers and the applicator beak is lowered using the hand lever starting labelling automatically.

The CP21-LC system will label products from 20 to 120mm diameter. For larger or smaller products.

Label rolls up to 250mm diameter can be used.

Labelling speeds up to 250mm/sec can be achieved.

The drive unit can be quickly and easily repositioned for different size products and locked down for reliable operation.

The CP21-LC allows products to be uniformly and professionally labelled for minimal capital cost.
