

## COLLAMAT

Industrial Label Applicators & Labelling Systems

### *reliable - precise - flexible*

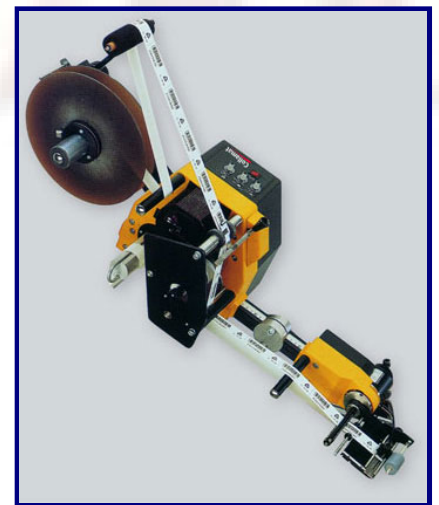

Swiss-made modular labelling systems for all applications and budgets.

The Collamat range includes a comprehensive choice of label applicators and complete labelling lines. Ranging from low-cost applicators to high-speed, high-precision systems, there is a Collamat solution for any labelling application

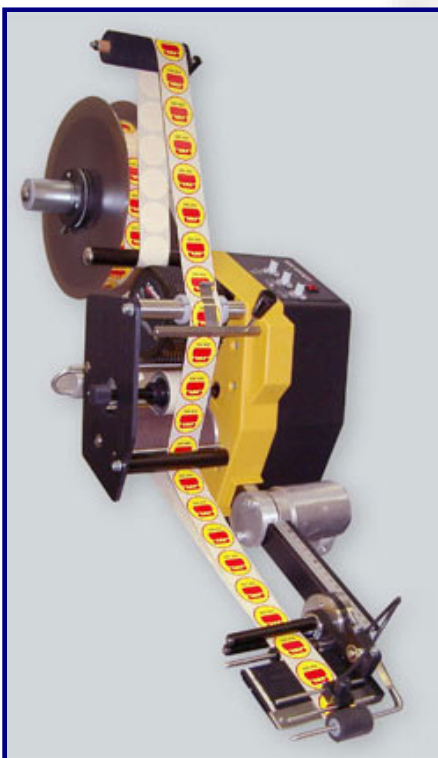

- 95 and 160mm wide applicators
- Dispense speeds up to 80m/min
- Industrial cast alloy frame
- Optional thermal transfer / hot foil coder or inkjet
- Wide range of applicator modules
- Modular design – easily changed for different applications
- Linerfree print-and-apply system eliminates backing paper
- CrossWeb system for multi-lane packaging machines
- Full range of automatic lines – bottle labellers, wrap-around...
- Semi-automatic applicators for offline labelling
- Custom system design to suit manufacturing processes

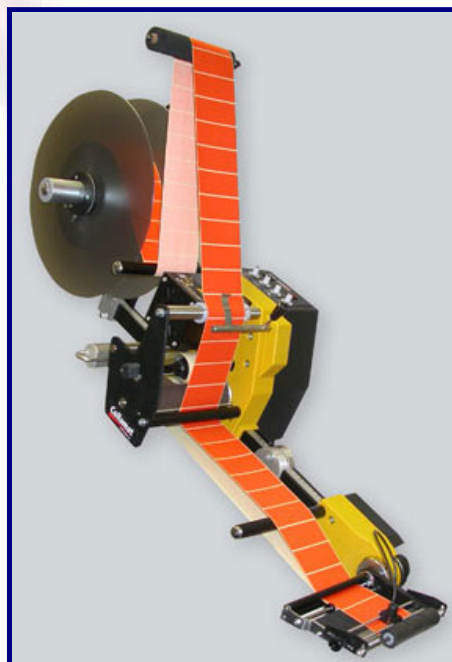

6610 Midrange Applicator

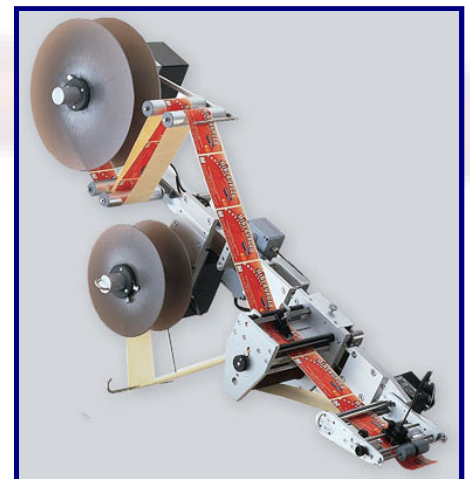

3610 Standard Applicator

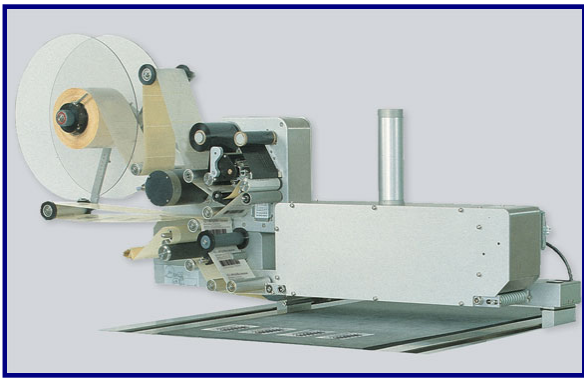

2610 Low-Cost Applicator

7610 High-Speed Applicator

9100 Ultra High-Speed Applicator

## Collamat 8000 CrossWeb

The Collamat 8000 CW comprises a label dispenser and vacuum chamber which is mounted on top of a thermo forming machine. It applies a full row of labels in one operation increasing productivity and combining packaging and labelling in one operation. The system can be supplied with a printer module (print & apply) further increasing productivity.

### Modular

Each Collamat system is built from a number of modules which can be easily changed in line with evolving requirements therefore ensuring your investment is protected.

Application modules include standard beak, sprung beak, electromagnetically controlled beak (for labelling in recesses), tamp, bottle-wrap and corner wrap.

Tamp applicator

### Precise

High quality components and precision manufacturing ensure labels are reliably and precisely applied. A range of sensors is available for different label types.

### Robust

All Collamat modules are constructed from high quality materials using the latest manufacturing processes.

## LABELLING SYSTEMS

The Collamat modular design extends to full labelling systems allowing component modules to be assembled into automatic labelling lines. Components include:

- Product conveyors
- Wrap-around units
- Top stabiliser conveyors
- Product separation units
- Height & reach adjusters
- Control systems

Using these modules a wide variety of labelling systems can be built including top labellers, bottom labellers, top & bottom labellers, wrap-around bottle labellers, front / back bottle labellers and many other combinations.

## LINERFREE SYSTEMS

Collamat Linerfree systems allow linerless label material to be used instead of die cut labels. By eliminating the backing paper, label material costs are significantly reduced, backing paper waste is eliminated, 60% more labels per roll can be achieved and the same label material rolls can be used for many different label sizes.

**eliminate waste - reduce costs - improve efficiency**

Collamat Linerfree
